Create a Careers Page using easy.jobs for Your WordPress Website

WordPress Plugin · https://easy.jobs/de/docs/career-page-wordpress/

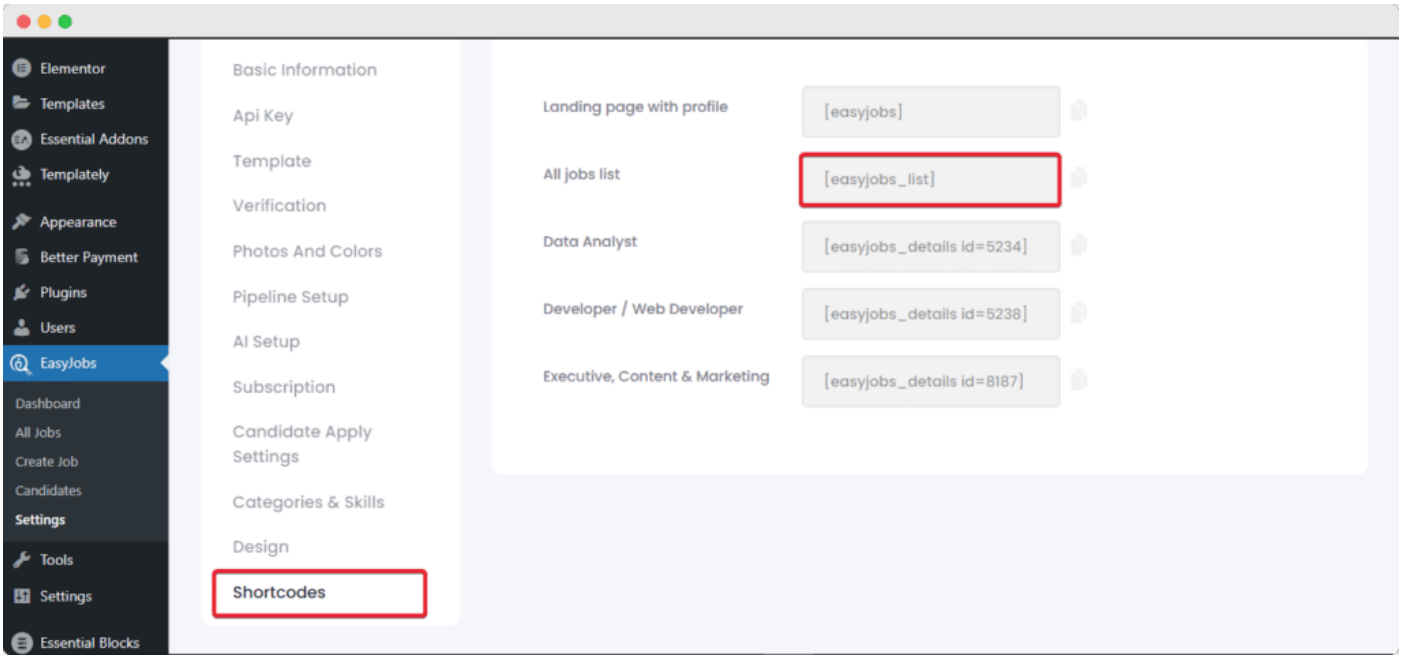

With shortcodes, you can create a careers page for your WordPress Site & showcase your job posts.

Create a Career Page using easy.jobs

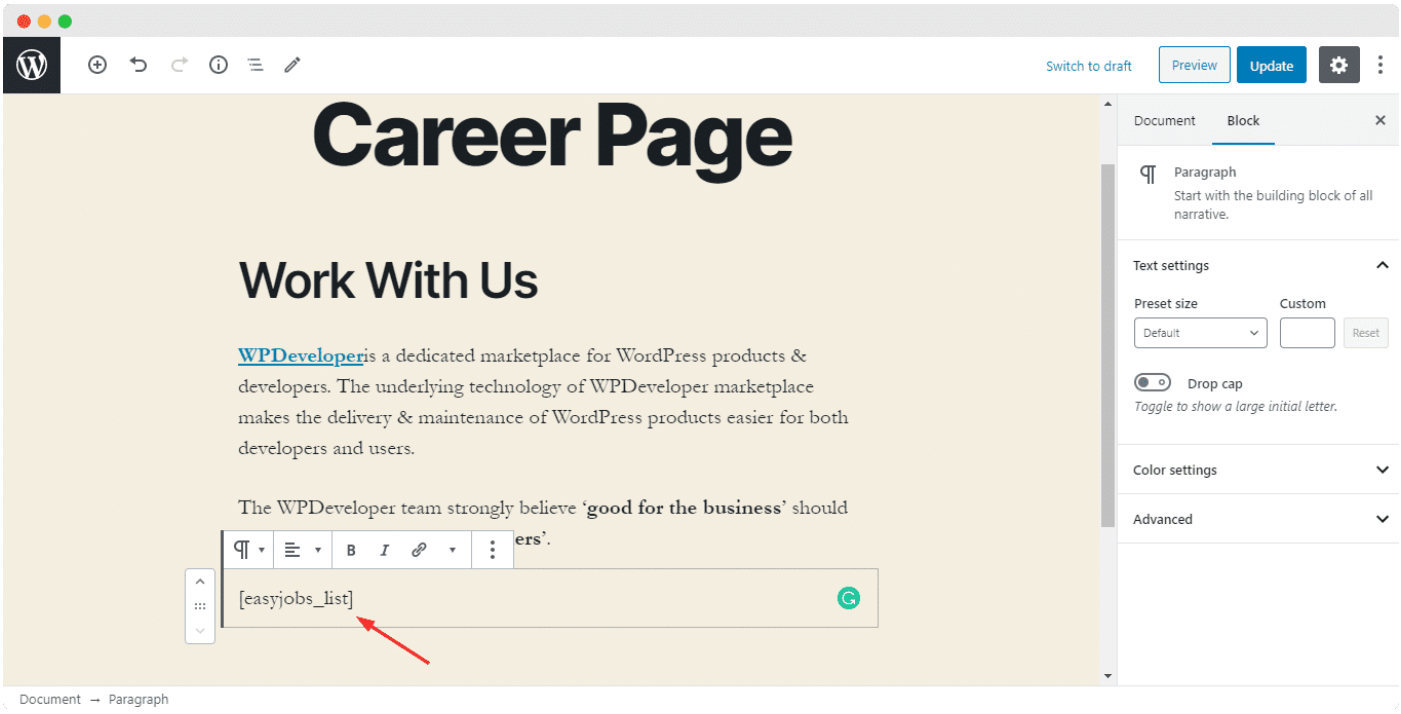

- First, connect your **easy.jobs account with your WordPress Website.** When you are done, you can start using shortcodes. You can see the list of all jobs on your easy.jobs account by navigating to easy.jobs→All Jobs→ Published Jobs.

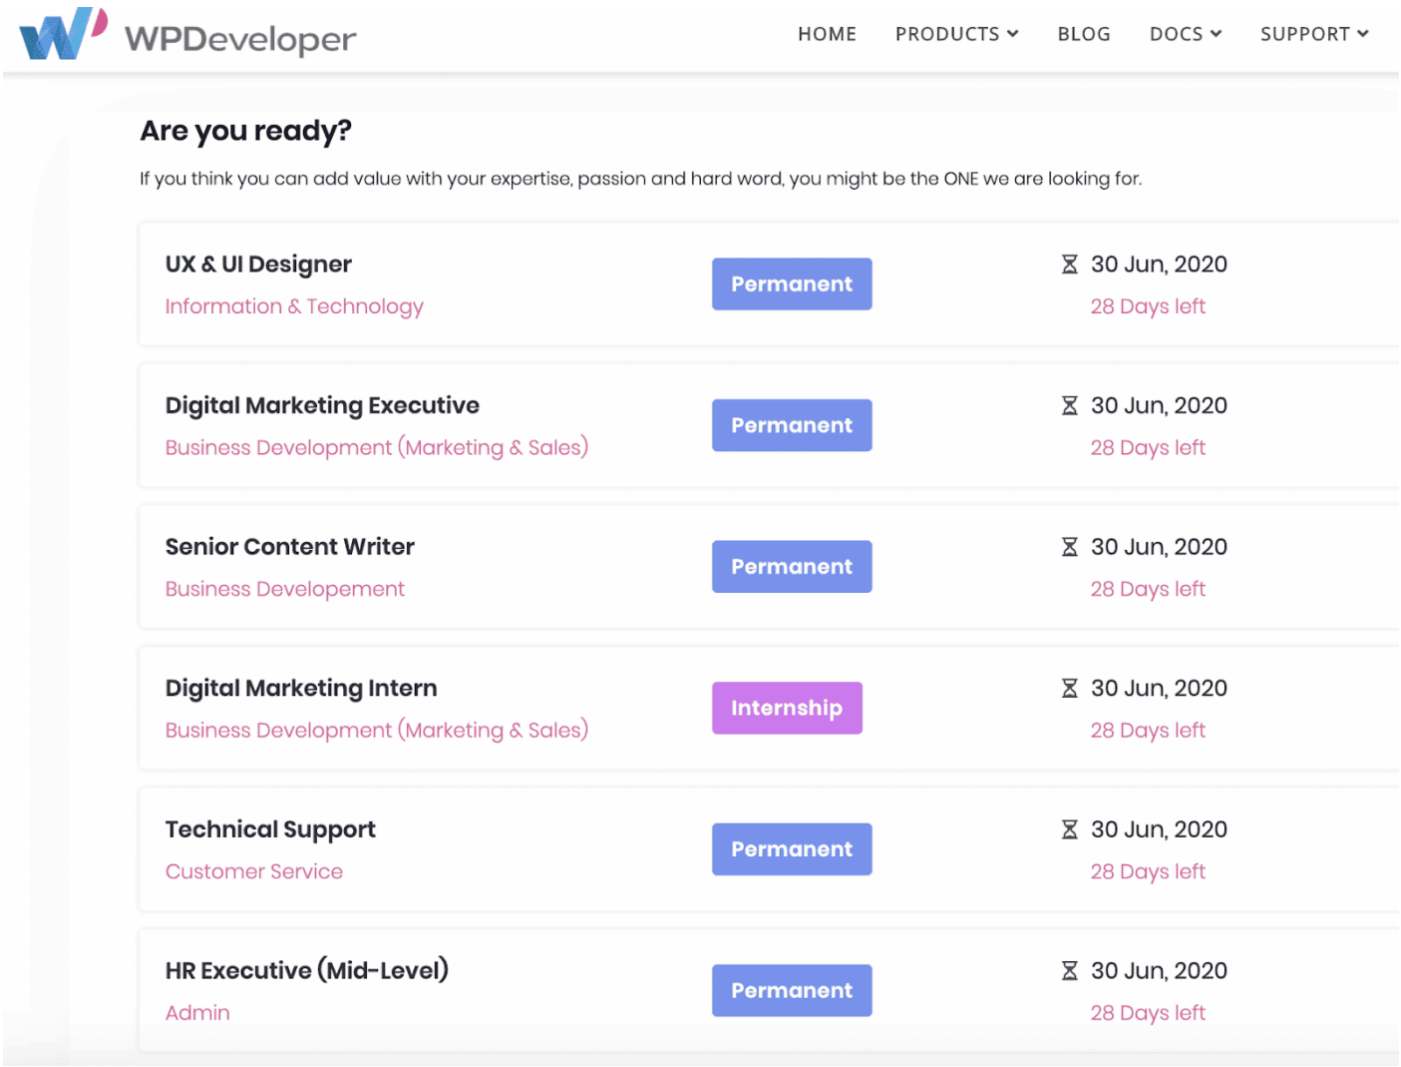

- You will find the shortcode for all jobs by navigating to easy.jobs→**Settings→Shortcodes**. Copy the shortcode.

- Now open your Careers Page. If you have not yet created a Career Page you can do it by navigating to **Pages→Add New**. Paste the shortcode inside the page.

- Open the preview and you will see your jobs are beautifully sorted into a list. All the jobs are posted inside a box layout having three separate columns, one for the title of the jobs, the second containing a CTA, and the third one showing the time remaining before the deadline for application. The job list box also comes with its own heading.
